

## *Nuclear Power Is Not Safe*

**Green energy needs to be non-polluting and safe; these are hardly words that can be used to describe nuclear energy.**

**We believe that**

- **any waste product from a non-polluting and safe energy source should not have to be shielded from humans and our environment for hundreds of millennia**
- **transportation of waste products from green sources of energy should not put thousands of people in harms way**
- **storage of waste products from safe energy sources should not be vulnerable to attacks from terrorists**
- **safe energy sources should not be terrorist targets that could lead to thousands of deaths and devastate hundreds of acres**
- **any green energy source should not potentially be the contributing factor to the proliferation of nuclear weapons**
- **government regulations which allow permissible levels of corrosive chemicals and radioactive materials to be released into our air, water and soil does not mean non-polluting or safe**
- **any energy source which requires a 50 mile emergency panning zone cannot be classified as safe because of either human error or accident**
- **the strategic outcomes of green energy sources should contain the following:**
  - **No acute radiation exposures resulting in fatalities.**
  - **No releases of radioactive materials that result in significant radiation exposures.**
  - **No releases of radioactive materials that cause significant adverse environmental impact**
